

Parental Control Apps 2018

Parental control apps for mobile devices work best when they're part of a comprehensive approach to teaching your child about behaving responsibly online. That means talking to your children about what they should and shouldn't do with their mobile devices, clearly communicating how you expect them to act and making clear that you will be monitoring what they do with their phones.

Parental control apps can help you maintain control in a wide variety of ways. Some of the most common types of monitoring include web content filtering, app blocking, time management, and location tracking.

No parent control app is perfect. The parental control space is always changing—especially on the mobile side of the equation—so we will try and update these when new entries appear and as others fade away. If you use a parental control app that we did not mention and have strong feelings about it one way or another, be sure to contact the school.
